

Core Ability Report – Social/Natural Theories

Spring 2018

Published: 05/18/2018

As a result of this program: I learned how to transfer social and natural science theories into practical applications.

#	Answer	%	Count
1	Strongly Disagree	0.00%	5
2	Disagree	0.00%	7
3	Neither Agree nor Disagree	60.00%	54
4	Agree	40.00%	175
5	Strongly Agree	0.00%	94
	Total	100%	335

Provide any comments you have on transferring social and natural science theories into practical applications.

I don't believe it's applicable

the courses provided a very good over view of all types of social issues.

i don't think that applies here.

I do not see how natural sciences apply to this program. The social sciences wrapped up with some of the other lessons in economics, quality customer service, and supervision classes. It was easy to see the relationship between all of these and how it can be applied to the workforce.

The class work we did was easy to transfer into the practical lab setting

Reassure patients when walking in room to check on equipment- reassure that nothing is wrong, identify yourself, explain what you are doing.

Management and how to deal with different personalities

Generals helped in this as well as restaurant in the spring terms for social skills

social interaction with co-workers, supervisors, and customers.

not sure how natural science theories apply to this but sure

None

Through our placements we learn many social and natural science theories into practical applications. For example we would learn about lesson planning, ways of communication and many more in class then incorporate what we learn into a childcare center classroom or school district.

in multiple situations we would take real life examples and put them into numbers and I feel as though this really helped to put things into perspective more for us. We are going to be more in tune with something we are interested in and are familiar with.

This program teaches you how to apply many concepts to the real world, why, and what they mean

Human diseases and learning different management styles

Human diseases and we learned different management styles

There was a lot of focus on this and I feel very comfortable applying social theories.

I feel like the Human bio class I took was more worded for nursing students. She had a hard time relating it to the social work field and when she did try it ended up being much more confusing.

My Human Biology class was very informative! So much so that my daughter wants to learn more about Human Bio, and she's only 6! The course was set up in a way that it made learning easy, and Xxxx was an amazing instructor!

I think we were showed this a lot in the psychology and sociology courses that we need to take.

It would have been helpful to do more of this, as some people are big hands on learners and really learn by doing, otherwise I think I learned a lot here.

I think this follows closely to every technique we learned.

Not applicable?

I'm not sure what "social and natural science theories" are.

What on Earth are you talking about? At no point did any class at WTC specifically mention any "natural science theory" or "social science theory", to the best of my recollection.

Xxxx and Xxxx were fantastic about helping us to translate what a client is asking for into something that we can tangibly build for them. They were also great about giving guidance about how to spec out a project to see whether it is something doable in a given time frame and different ways to deal with that. Xxxx Xxxx's advice is to "say yes to everything." Worst advice ever.

I enjoyed taking the psychology class and the ethics class. I think I learned quite a bit in both that I hadn't known previously.

I learned this from Xxxx, not Xxxx.

We were well prepared for different social settings.

No science was involved.

We have had multiple cases for using natural sciences in applications.

I use what I learned in the Ethics and Diversity classes everyday. The Ethics class was particularly tough, but I learned so much and the topic I chose for the final paper was very educational for me and everyone around me. The Diversity teacher was amazing and really effective at creating/guiding classroom discussions on controversial topics.

ethics in the workplace is important. It's valuable to be able to understand why people act the way they do and be able to empathise with them.

I don't know how to answer

I don't know what this means.

N/A

no complaints

nothing to add

n/a

We learned the theories behind the testing that we do. I feel like this helps me understand my job better.

As pertains to applying the science of the body into real life conditions - yes. Not as much on the social theories.

I feel that the focus on evidence based practice is so important and although I struggled with finding all those rationales.

Clinical was a key to taking what we learned in theory classes and applying in real time settings with guidance from instructors.

I have been able to transfer the knowledge that I acquired in my health alterations classes to my clinical practice. It has given me in-depth knowledge on why certain nursing interventions should be performed or not performed at certain times.

This was utilized primarily during clinical experiences.

I gained a much deeper understanding of disease process, and how I can help resolve these.

through some instructors that taught with powerpoints and not out of the book. I can read a book but examples and in depth teaching on a topic that the instructor knows about was more helpful.

Fabrication of two splints.

Could use some better explanations.

We focused on this briefly. I was not confident in this area after we practiced.

Fabricated static and dynamic splints

Splints were not given enough time to teach this objective.

Nothing

I have learned so much and apply it every single day to both every day life and in my clinical settings

would be nice to have more repetition of these basic principles throughout the program.

I learned how to psychologically effect viewers through visuals and audio techniques.

Make this class more than just an afterthought. It can be expanded on, or maybe explain to us why it was only on Fridays. Good class. I have a personal interest in all things Science.

doesn't apply to this setting very well

Not sure that social and natural science theories do with this program

Not sure what social and natural science theories do with this program.
